BIOLOGY

(Theory)

Paper 1

Nov./Dec. 2023

21/2 hours

UGANDA NATIONAL EXAMINATIONS BOARD

Uganda Advanced Certificate of Education

BIOLOGY (THEORY)

Paper 1

2 hours 30 minutes

INSTRUCTIONS TO CANDIDATES:

This paper consists of sections; A and B.

Answer all the questions in both sections.

Write answers to section ${\bf A}$ in the boxes provided and answers to section ${\bf B}$ in the spaces provided.

No additional sheets of paper should be inserted in this booklet.

For Examiners' Use Only

SECTION A (40 MARKS)

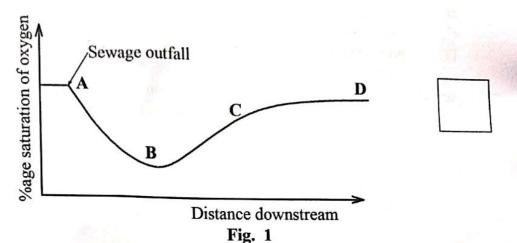

Candidate's Name: h.....

Write the letter corresponding to the right answer in the box provided. Each question in this section carries one mark.

1.	Durin	g indirect flight in insects, the elevator muscles contract and the
	A.	roof of the thorax is pulled downwards.
	B.	roof of the thorax curves upwards.
	C.	wings move downwards.
	D.	wings provide lift for movement.
		The Northbert 1911
2.	The e	volutionary significance of mandibular mouth parts in larval form ent from proboscis in adult form of a butterfly is to
	A. B. C. D.	increase competitive advantage of the larval form. reduce interspecific competition for available food. reduce intraspecific competition for available food. increase selection pressure on the adult form.
3.	The c	ell organelle important for cell wall formation in a plant cell is
	A.	chloroplast.
	B.	ribosome.
	C.	Golgi apparatus.
	D.	endoplasmic reticulum.
4.		y hatched chicks are seen to follow and move around the first object see after hatching because
	A.	at critical periods particular stimulus is permanently associated with particular response.
	B.	the organisms at young age survive by trial and error learning.
	C.	at young age animals display exploratory behaviour patterns.
	D.	the chicks use their insight to solve the immediate problems.
		A CONTRACTOR ASSESSMENT
5.	A situ	ation where the survival rate of babies of the same age weighing
	betwe	en 5 kg to 8 kg is higher than that for heavier or lighter babies is due to
	A.	disruptive selection.
	B.	directional selection.
	C.	stabilising selection.
	D.	adaptive radiation.

6.	In a	ilternation of generation, the	
	A.	spores are produced from haploid cells.	
	В.	gametes are produced by mitosis.	
	C.	gametophyte is the asexual stage.	
	D.	spores are produced by mitosis.	
7.	Whi phot	ich one of the following factors would promote the highest rate of tosynthesis in a plant where light is not a limiting factor?	
	A.	0.10 % CO ₂ at 20 °C.	
	В.	0.03 % CO ₂ at 20 °C.	
	C.	0.03 % CO ₂ at 28 °C.	
	D.	0.10 % CO ₂ at 28 °C.	
8.	produ	at is the percentage net primary production if the gross primary auction of decomposers is 20,000 kJ m ⁻² yr ⁻¹ and respiration is 00 kJ m ⁻² yr ⁻¹ ?	
	A.	10.0	
	B.	11.1	
	C.	20.0	-
	D.	90.0	
9.	The a	amount of glucose produced in one Calvin cycle is less than expeduse	eted
	A.	the concentration of the enzymes that catalyse the reactions is le	ow.
	B.	a very unstable compound forms in one stage and splits immediately.	
	C.	some of the 3 carbon sugar formed is used for regeneration of the carbon dioxide acceptor.	
	D.	the energy required to form glucose has to be obtained from	
	٥.	other reactions.	
10.	A aus	adrat of 0.5 m ² was randomly thrown different times in an area a	nd each
10.		the number of plants obtained were recorded as 2, 5, 8 and 7. Wh	
		opulation density of the area?	100 15
	A.	5.25	
	B.	11.00	
	C.	44.00	
	D.	88.00	
	D.		
	D.		
	Ъ.		

11. Figure 1 shows changes in oxygen concentration downstream of a river. At what point of the curve is the BOD highest?

- 12. Which one of the following pairs of hormones promote cell enlargement in leaves? Both
 - IAA and gibberellic acid.
 - B. Cytokinins and ethene.
 - C. Gibberellic acid and cytokinins.
 - D. IAA and ethene.
- 13. The amount of DDT in zooplankton was measured as 0.04 ppm and that of small fish as 0.5 ppm. The DDT bioaccumulated in small fish by
 - A. 0.02
 - B. 0.054
 - C. 0.08
 - D. 12.50
- 14. Counter current flow system is more efficient than parallel flow system because in counter current flow the
 - A. gills expose a greater surface area for diffusion.
 - B. distance across which gases diffuse is reduced.
 - C. speed of water is increased.
 - D. concentration gradient is maintained.
- 15. The success of angiosperms on land is greater than that of the conifers due to the
 - A. possession of seeds.
 - B. possession of flowers.
 - C. development of true roots.
 - D. presence of mechanical tissues.

16.	What is the pressure potential of a cell whose solute potential is - 4900 kPa and water potential is - 4400 kPa?						
	A. B. C. D.	9300 kPa. - 9300 kPa. 500 kPa. - 500 kPa.					
17.	Whic	ch one of the following structures gives rise to lateral roots in its?	higher				
	A. B. C. D.	Cambium. Endodermis. Pericycle. Epidermis.					
18.	The	significance of retaining urea in cartilaginous fish is to					
	A. B. C. D.	prevent loss of water by osmosis from the tissues. make their blood isotonic to the environment. enable them to extract nitrogen from urea. allow for the conversion of urea to ammonia.					
19.	A ris	se in the osmotic pressure of blood leads to					
	A. B. C. D.	inhibition of ADH production. a decrease in blood volume. an increase in the volume of water absorbed. an increase in production of ADH.					
	***** ' -1	h one of the following conditions would result into RQ greate	er than 1.0?				
20.	A. B. C. D.	Aerobic oxidation of carbohydrates. Release of energy from seeds submerged in water. Respiration during prolonged starvation. Feeding on fat rich food.					
21.	Which	ch one of the following cells produce structures that give stre hness to areolar tissue in animals?	ngth and				
	A. B. C. D.	Fibroblasts. Mast cells. Fat cells. Macrophages.					

22.	The and v	tidal volume of a person whose ventilation rate is 200 dm ³ per minute who breathes 40 times in the same period is
	A. B. C. D.	5 dm ³ . 160 dm ³ . 240 dm ³ . 8000 dm ³ .
23.		quantity of mineral salts in the soils of tropical rain forests are low use the
	A. B. C. D.	standing crop biomass is small. high temperatures destroy nutrients. abundance of decomposers is decreased. nutrients are rapidly taken up by many plants.
24.	Whic simil	ch one of the following statements is correct about the presence of a ar structure of cytochrome C in both man and chimpanzee?
	Both	species
	A. B. C. D.	evolved at the same time. show divergent evolution. show convergent evolution. evolved at different time.
25.		r soluble compounds enter cells less rapidly than lipid soluble cules because
	Α.	cell membranes contain more phosphate heads projecting outwards.
	B.	components of the membrane are polar to allow limited entry of water.
	C. D.	of a large hydrocarbon tail component of the cell membrane. cell membranes contain channel proteins that are impermeable to water.
26.	Which	one of the following graphs in figure 2 illustrates a growth rate?
	Ą	A. II B. C. III B. D.
	Increase in height	Time Time Time Time Time Time Time Time
		Fig. 2

27.	The f	The following are adaptations of fresh water fish to conserve water except					
	A. B. C. D.	possession of numerous large extensive reabsorption of sa excretion of trimethylamine active uptake of salts by gil	ge glor ilts bac	neruli.			
28.	Whic secre	Thich of the following pairs of hormones reach their highest peak of cretion at the point of ovulation? Both					
	A.	LH and progesterone.	B.	FSH and oestrogen.	\neg		
	C.	FSH and LH.	D.	LH and oestrogen.			
29.	Reco	mbination of linked genes du	ring g	amete formation occurs by			
	A.	independent assortment.	B.	crossing over.	\neg		
	C.	thickening of chromatids.	D.	non-disjunction.			
30.	Neo-	Darwinism differs from Lam	arckisı	n in that in Neo-Darwinism the			
	A. B. C. D.	environmental pressure is the variation arise by chance macquired characteristics are genes are modified by the environmental pressure is the	utation passed environ	n. I onto the offspring. ment.			
31.		ch one of the following is the synapse is unidirection:		t reason why impulse transmissio	n 		
	A. B. C. D.	permeability of the pre-syn- permeability of the post-syn- presence of Na ⁺ ions in the presence of synaptic vesicle	naptic synap	membrane to Na ⁺ ions.	in the		
32.	Duri	ng the muscle contraction pro	ocess, t	he calcium ions			
	A. B. C.	are necessary to bring the light band and H - zone together. strengthen the muscle fibres to prevent wear during contraction. act as cofactors that activate enzymes responsible for the process.					
				xhibits metameric segmentation?	i.		
33.			В.	Hydra.			
	A.	Liver fluke. Earthworm.	D.	Roundworm.			
	C.	catmoon.	7	Turn ()ver		
			,				

Figure 3 shows the effect of partial pressure of oxygen on the oxygen 34. saturation of haemoglobin.

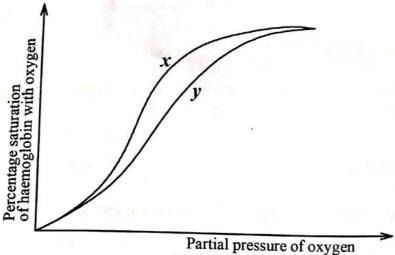

Fig. 3

Which one of the following conditions in a mammal would result into shifting of the curve in figure 3 from position y to x?

- A. Increased strenuous exercise.
- B. Increased metabolic rate.
- C. Decreased respiration.
- D. Cold environmental temperature.
- Which one of the following processes in plants would drastically slow down when soil becomes water logged?
 - A. Mineral uptake by roots.
- Root pressure. B.

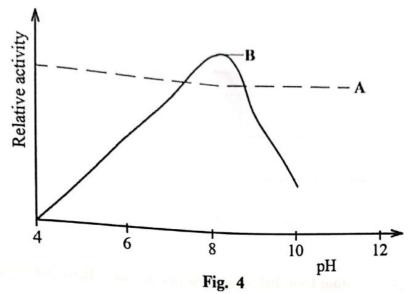

- C. Capillarity.
- D. Water uptake by root hairs.
- Which of the following is a characteristic of muscles found in the walls of 36. the alimentary canal? They
 - contract powerfully without fatigue. A.
 - contract rapidly with fatigue. B.
 - relax rapidly with fatigue. C.
 - contract slowly without fatigue. D.
- 37. Which one of the following methods can be used to preserve genetic stock of endangered species?
 - A. Captive breeding in a zoo.
 - Crossing threatened species with other related species. B.
 - Ecological study on threatened species. C.
 - Removal of animals from threatened area. D.

38.	Which	h form of light would trigger early flowering in long day plants' far - red light dwe)
	A. B. C. D.	far - red light during the night. red light during the night. far - red light during the day. red light during the day.	
39.	Whic auxin	h one of the following processes will occur in plants if the sup s from leaves exceeds that from the stem?	ply of
	A. B. C. D.	Fruit abscission will be inhibited. Leaf abscission will be inhibited. Fruit development will be stimulated. Leaf senescence will be delayed.	
40.	Whic mam	th one of the following is an adaptation for conserving oxygent mals?	in diving
	A. B. C. D.	Having small blood vessels to transport oxygen. Having a lower proportion of red blood cells. Maintaining a slower heartbeat. Having less concentration of myoglobin.	
		SECTION B (60 MARKS)	
		Write the answers in the spaces provided.	
41.	(a)	Why is the structure of the plasma membrane of a cell	
		(i) described as a partially permeable?	(02 marks)
